PLAYSPACE 2 (HILLCREST STREET) ; 5yo and over Targeted

CLIMBING CUBE AND TUBE SLIDE COMBINATION UNIT

Offering a variety of climbing and agility activities in a relatively compact space, users can play inside of the cube as well as on all sides.
The standout feature is the 2400H bright red tube slide, that is accessed by climbing up and onto the cube top level , making this unit definitely more of a challenge for older children.

PENDULUMN SWING

The nest basket can hold multiple users, with the central pivot point allowing the seat to rotates as well as swing back an fro.
A wetpour rubber section below the basket connects to the main path for all abilities access.

Landscaping is to be minimal, with emphasis on simple groups of shade trees planted within open grass space.

New playzone will integrate & give purpose to the existing shade structure/seating for use as a rest point, and place to comfortably supervise play.

FREE RIDER is a something a little different to try - requiring balance and agility, it could be described as a cross between a swing and surfing.

ROTONET Spinplay combines with a climbing net - smaller children can sit inside the net, or those seeking a wilder ride can hang onto the outside as the unit spins.

The quieter side street location lends the reserve to group fitness classes in the open grass areas - with the convenience of an existing parking bay for participants who may drive to the sessions.
